Honda CRF1000 Africa Twin MY 2018	License plate holder in composite material with license plate LED light.	1	07/03/20
DESCRIPTION & TECHNICAL DATA			

DESCRIPTION

This product has been designed to lighten and improve the appearance of the rear part of the bike avoiding excessive inclination of the license plate. With the driver on board this inclination is maintained within 30°

IMPORTANT! It can be fitted only by MY2018 -2019

The length of the area for the plate has been defined to be able to accommodate a reflector; if it is considered excessive it is very easy to shorten it using a common saw then finishing with abrasive paper.

It is made of composite material cured under vacuum, using epoxy resin and carbon fiber with special Kevlar felt reinforcements where needed
The stratification is also diversified in the thicknesses according to the area in order to optimize the strenght / weight ratio.

Like all Landmark.works products, it is easy to fit and not any modification of the bike is needed.

It can be supplied complete with approved license plate light - aluminum body and 5 LED - or without it, pre-drilled for fitting the OEM license plate light.

In the first case the electrical connection requires an adapter, supplied separately, while in the second it is obviously not required any adaptation.

TECHNICAL DATA

- Construction in composite material, vacuum cured, using Epoxy resin, carbon fibers with special Kevlar felt reinforcements.
- Lamination with different thicknesses in different areas for a better strenght / weight ratio
- Weight: plate holder only 150g, complete with license plate light 245g.
- "Plug & play" fitting; no mechanical adaptation needed.
- Sealed license plate light unit, aluminium body with 5 high brightness LED
- As alternative it is possible to fit the OEM license plate light

This item is purchased, fitted and used under owner's responsability, Landmark.works is not responsible for any kind of direct or indirect damage due to the use of this product
