HONDA XR 650 R	Carbon / Kevlar Skid Plate	1	08/10/15
PRODUCT DESCRIPTION & TECHNICAL DATA			

DESCRIPTION

This skid plate has been designed maintaining the original shape and improving the protection in the bottom area.

This is achieved by eliminating the big opening provided to directly access the oil drain plug; we believe that this extra protection can widely compensate for the time needed to remove the skid plate before oil draining.

It is made of composite material vacuum cured, using epoxy resin, Kevlar, carbon fiber and other materials expressly chosen for maximizing the impact resistance.

The outer layers are made of Carbon 100% fiber to maintain a good aesthetic appearance in case of impact, while the internal are in mixed Kevlar / Carbon fibers

The layering is also diversified in thickness depending on the area, in order to optimize the performance / weight ratio.

The installation doesn't need any modification on the bike

This skid plate is purchased, fitted and used under owner's responsibility, Landmark.works is not responsible for any kind of direct or indirect damage due to the use of this product

TECHNICAL DATA

- Construction in composite material, vacuum cured, using Epoxy resin, Kevlar, carbon fibers and other shock resistant materials
- Lamination with differentiated thickness in different areas for a better performance / weight ratio, thus optimizing the impact resistance
- Weight: 750 grams
- No modification needed on the bike for installation

All specifications are subject to change without prior notice
