Model	Item	Rev.	Date
KTM 990 /950 Adventure	Low-profile windshield in composite material	0	16/11/26
DESCRIPTION / TECHNICAL DATA			

DESCRIPTION

The windshield has a lower profile than the standard one for improved off-road use, while also offering more space to mount any instruments.

It also offers greater rigidity than the standard windshield, improving local fairing stability.

It is made of vacuum-cured composite material, using epoxy resin and carbon fiber with special Kevlar felt inserts and polyurethane foam where necessary.

The layering also varies in thickness depending on the area to optimize the performance-to-weight ratio.

It's perfectly compatible with both the standard headlight and our LED headlight unit, and can be installed without any modifications, like all Landmark.works products.

Supplied with a satin clear coat.

It is available in two versions:

As a simple windshield, to save weight and perfect for off-road use as it improves the field of vision.

With an integrated instrument support.
If you don't have serious rally ambitions, it significantly reduces weight and costs compared to a tower, while the instrument placement is significantly better than handlebar mounts and similar solutions.

The support is tilt-adjustable and can accommodate a navigation device, whether a GPS, cell phone, or tablet weighing up to 550g.

This version is further reinforced.

The specific instrument bracket is not included.

This windshield is purchased, mounted and used under the user's responsibility. Landmark.works is not responsible for any direct or indirect damage resulting from its use.

TECHNICAL DATA

- Made of vacuum-cured composite material using epoxy resin, carbon fiber, and Kevlar felt.
- Differentiated layering to optimize impact resistance to weight ratio, with reinforcements in the most stressed areas.
- Available with an integrated instrument support, adjustable for tilt.
- Weight of the windshield alone: approx. 300g.
- Weight of the version with instrument support: approx. 450g.
- Height from the top edge of the headlight: 220mm.
- Plug & Play assembly; no adaptation required.
